

Put an end to piles of paper!

store+ find – systematic document management.

Customised document management for SMEs.

store+find saves all company information and makes it available at the touch of a button.

In many companies documents and information still end up in storage boxes, files or cupboards. In the long term this not only takes up space, but looking for specific documents also takes up valuable time. Sometimes documents may even get lost.

Efficient administration? Far from it!

A document management system (DMS) in which all important documents, receipts, faxes and e-mails can be captured and stored electronically can provide some relief.

However, especially for SMEs the cost of investing in a DMS and associated training has so far often been too high, and the products on the market have been too complex. With **store+find**, DEVELOP is now offering three versions of an easy, reasonably priced solution which has been specially designed for small and medium-sized businesses.

store+find and its functions:

- + Archiving scanned documents or those already stored in electronic format
- + Processing various formats such as .doc, .xls, .ppt, .pdf or .tif
- + Importing e-mails and e-mail attachments directly from Microsoft Office into the DMS
- + Easy tagging and document indexing
- + Full-text search within a document (OCR recognition)
- + Searching for saved documents via web browser or client programme
- + Follow-up options for documents and e-mails requiring further processing
- + Key word and index term entry direct to the DEVELOP multifunctional system during scanning

It is possible to enter key words and indices directly to the DEVELOP multifunctional system's display using the **store+find embedded add-on. The advantage is that documents can be indexed or categorised during scanning and captured direct by the document management system.**

A solution to meet all requirements.

Businesses, independent of the sector or size, have different requirements when using a DMS. This is why there are three versions of **store+ find**: “Team“, “Business“ and “Enterprise“. “Team“ is primarily suitable for small companies with one to three employees which want to store their documents electronically without investing a lot of time in a complex installation. “Business“ is mainly suited to businesses with several departments, which would value functions such as direct import from MS Office. “Enterprise“ on the other hand offers comprehensive functions such as fast e-mail import and integrated user administration for managing access rights to archived documents.

The following page contains an overview of the three versions' specifications. Whichever version you choose, **store+ find** can be upgraded at any time and the ineo systems are very easily integrated into every version.

store+ find benefits:

- + Attractively priced
- + Easy and quick installation by your professional DEVELOP dealer
- + Short training times due to intuitive user interface
- + Time-saving through selection of pre-set categories and key word entry directly into the DEVELOP multifunctional system
- + Shorter response times to customer enquiries as a result of finding documents quickly using allocation of key words or indices
- + Optimise office work procedures with a professional filing system
- + Space-saving: less or no more paper storage

store+ find: functions and specifications.

Function	Description	“Team“	“Business“	“Enterprise“
Plug&play	Easy installation without complicated configuration work	✓	✓	✓
OCR recognition	Full text search within a document	✓	✓	✓

OCR limitation	Scan volume per month	500	1,200	Unlimited

System requirements

store+ find

- + Server: Windows 2003 Server or Windows 2008 Server (each with the latest service pack)
Workstation: Windows XP, Windows Vista or Windows 7 (each with the latest service pack)
- + 32-bit systems: computer with Intel or compatible 1 GHz processor or faster (recommended: 2 GHz or faster; only one processor is supported)
- + 64-bit systems: processor with 1.4 GHz or faster (recommended: 2 GHz or faster; only one processor is supported)
- + At least 1 GB RAM (recommended: 2 GB or more)
- + 2 GB free hard disk space for store+ find programme component (without .NET Framework); database capacity depends on the volume of data archived
- + Microsoft.NET Framework 3.5
- + Microsoft SQL Server 2008 Express

MFP

- + ineo system with OpenAPI from version 3.0 / ineo system with a 8.5 inch colour display

store+ find does not include a proprietary back-up strategy and is easily integrated into existing system-level security concepts to prevent unintentional loss of the stored information. The customer is solely responsible for data security and documents saved using store+ find. Windows, Microsoft, its products and services are registered trademarks of Microsoft Corporation.
